

SPECIAL REPORT

WARNING

For Back
Surgery
Patients!

If pills, shots, surgery or chiropractic for your herniated, bulging or degenerated disc or chronic back or neck pain didn't work and no one has told you about spinal decompression!

Clifford underwent his first back surgery in 2001.

Clifford had been suffering with lower back pain for as long as he could remember. Over the years physical therapy and chiropractic had helped temporarily but eventually the pain got worse and the treatments less effective. He was tired of the pain in his low back and the constant tingling, numbness and shooting pain that went down his leg. He was sick of the daily trips to the physical therapist that weren't helping. He was done with the chiropractic treatments that felt good for a day or two only for the pain to quickly return. And most importantly he was literally sick of all the pills and their side effects of nausea, fatigue, stomach irritation and long term damage. So he did exactly what his Medical Doctor told him was "his only option at this point" which was to undergo surgery. Little did he know that would be the first of 3 back surgeries he would undergo only to become another "Failed Back Surgery Syndrome" statistic.

It seems as if everyone is talking about revolutionary, new spinal decompression for neck and back pain. It's been covered by ABC, NBC, CBS, FOX News and more. More than 7,000 neurosurgeons, physical therapists, medical doctors, and chiropractors have added spinal decompression over the last 10 years. More than 10 research articles support up to 80% ef-

fectiveness with even the toughest of cases. And now even other countries are getting in on the action.

Dr. Bailey, M.D. says...
Pain Management, Savannah, GA

"I was amazed at the results of spinal decompression. I was astounded. I have now treated hundreds of patients including myself and am continually impressed with the results."

Dr. Berkowitz, M.D....
Orthopedist, Atlanta, GA

"As an orthopedic surgeon and peer reviewer, I see many patients who are significantly worse after back surgery. In many cases, I believe that if they had been treated with spinal decompression before surgery they would have resolved completely"

What's All the Hype About?

Simple. Hundreds of thousands of successfully treated spinal decompression patients might say that spinal decompression was nothing short of a miracle. It has been called a "Godsend", "life changing", "miraculous", and even "the best decision I ever made." These mounting spinal decompression success stories are from patients who have helped find relief from back pain even after everything else failed, sometimes even after failed back surgeries. Celebrities, CEO's, Professional Athletes, patients into their nineties, and even medical doctors themselves all seem to know something that the general public still may not be aware of.

The Controversy

The controversy isn't over whether spinal decompression works. Hundreds of thousands of happy patients agree on that. The controversy is fitting "alternative" medical practices into a model dominated over the years by pharmaceutical pills, shots, physical therapy and surgery. Until recently patients like Hilma thought these were the only options. Patients complain every day that they don't want to take pills because of some potentially nasty side effects. Shots tend to be temporary and patients know that simply disabling your body from telling you not to do something in order to not make it worse is probably not something you want to disable. They say, "I want to actually FIX the problem, not just mask it."

The Breakthrough

Because of these concerns doctors, engineers, and researchers have spent the last 15 years searching for a non-invasive, non-surgical, pill free, clinically proven way to actually fix the growing epidemic of neck and back pain and not just mask the symptoms. So it's no surprise that when research began mounting showing up to 80% success rates, long term effectiveness and not just temporary relief from researchers and institutions such as doctors from

Mayo Clinic and researchers at John Hopkins, it created a serious stir.

The Revolution

The machine that was the subject of these research findings is called spinal decompression and is now being offered by thousands of clinics all over the world. In fact some believe that "there will come a day when EVERY back pain specialist, physical therapist and chiropractor will have a spinal decompression table because that's how effective this treatment really is." One Orthopedics Surgeon has even been quoted as saying, "As an orthopedic surgeon and peer reviewer, I see many patients who are significantly worse after back surgery. In many cases I believe that if they had been treated with spinal decompression before surgery they would have resolved completely". Dr. Howard Berkowitz,

Clifford's Results....

"Thankfully my wife saw an ad in the newspaper about spinal decompression. Even though the doctors warned me that because of previous surgeries I may need more treatments and my results may not be as dramatic, I can now say that after only 5 weeks I am 80% improved and I am excited about life again."

M.D., Orthopedist, Atlanta, GA. Many clinics have even added up to 10 spinal decompression tables just to keep up with the demand of the happy, successful, life changing results of their local patients. This treatment has gone from a medical doctor just wanting to fix his own back pain to a full blown phenomenon. Even the United States patent office has added several patents for spinal decompression equipment to protect the technology from imitators.

Now, thanks to revolutionary spinal decompression technology patients are saying goodbye to 10, 20 even 30 years of back pain with this comfortable, safe, non-surgical back and neck pain option. Luckily Hilma was one of those. Hear what she had to say. "I was three days from having back surgery when I saw an ad in the newspaper. I came down to the office and the Doctors explained everything. The Dr's put me on the Decompression Table and only 3 weeks later my back and leg feel wonderful. No more pain pills or emergency room visits for me. I cannot say enough about Spinal Decompression! I recommend it to anyone with back or neck pain."

What are the Side Effects?

No therapy is ever going to be free from side effects. The most common side effect is a mild soreness after the

first few treatments from stretching muscles that haven't been stretched in a while. This is usually a mild, dull, achy soreness that goes away after the first 3-5 treatments. Also, one patient named Ron W. reported that he was mad because now that he doesn't have pain any more his wife made him clean the garage.

Will this new therapy put spinal surgeons out of business???

SO, What's the Catch?

Dr. Alex Jimenez, one of the nation's spinal decompression specialists says "There are 3."

Less Expensive Than Surgery:

"First, while spinal decompression is far less expensive than surgery, the treatments are not always covered by insurance. Luckily the treatments are affordable and most clinics offer financing and discount programs."

Much Shorter Time Commitment:

"Second, some patients will require up to 4 weeks of treatments. While many patients get significant relief after the first week of treatments, some patients may require up to 4-6 weeks of care to see maximum results depending on the patients health, severity, duration of symptoms, and social factors such as diabetes, obesity, smoking and others."

It's Not for Everyone:

"And last but not least some patients do not qualify for this program. Patients such as pregnant women, spinal cancer patients, patients with aortic aneurysms and a few other conditions do not qualify. Check with your doctor to see if your condition would qualify for spinal decompression treatments."

How Can I Find Out If Spinal Decompression is Right For Me?

Dr. Alex Jimenez has one of the few prestigious clinics in the area now offering spinal decompression treatments and accepting new patients.

Call today to see if you qualify for spinal decompression treatments for:

- A Herniated Disc
- Bulging Disc
- Degenerated Disc
- Sciatica, or
- Chronic Neck & Back pain.
